

# The Projects

Communication, multiple iterations, and testing are key

# Basic Approach

- Software is new product development
- Have to manage uncertainty
- Must adapt to change

# Weekly Presentation

- Weekly presentation by each group about what is going on.
  - Your assessment of the requirements
  - Progress toward your objectives for the next iteration
  - What might you have to drop
  - Other news about what you are doing

# Monthly Project Iteration

- Software demonstration and link to where we can try it out on the web.
- The class goes through and reviews contributions in their blogs.
- Summary of targeted requirements and what was achieved. What were your problems?
- How has your assessment of the requirements changed?
- What do you plan for the next iteration? Be ambitious. You can always reduce scope.
- What will the final deliverable look like?

# Weekly Meeting I

- Who is in your group?
- What is your project?
- What is your initial assessment of the requirements?
- What do you think the final deliverable will look like?
- What will you achieve by Iteration I?

# Summary

- We will be focusing on Web 2.0 technologies that will help you with your projects.
- Your blog posts will influence the content of the class.
- We will use agile methods to organize the project activities.
