

TC-1 Workshops

Summer 2009

Pat Williams

Art Department — Eastern Michigan University

TC-1 Basics

June 13-14, 2009

Learn how to prepare an image for weaving, how to assign weaves, and how to prepare a digital file for the loom. You'll be provided with a selection of weaves to get started. Each person will work at a computer workstation with *Photoshop* and *JacqCAD* installed, and will have an opportunity to weave a small study piece. By the end of the weekend, you should have a much clearer understanding of what is involved in designing for a hand jacquard loom. *Limit: 6 students*

Introduction to Jacquard Weaving

June 20 - 28, 2009

Advanced Jacquard Weaving

August 15 - 23, 2009

Learn how to draft a set of compound weaves, and how to develop digital files suitable for weaving with several shuttles. The *Introduction* workshop will focus on 2-shuttle weftback weaves, the *Advanced* workshop on 4-shuttle turned tapestry weaves.

Each person will work at a computer workstation with *Photoshop* and *JacqCAD* installed, and will have an opportunity to weave a small technical test as well as a larger study piece. By the end of each workshop, you should better understand some of the many possibilities for working with multi-shuttle compound weaves to realize your ideas. *Limit: 6 students*

Please Note: *TC-1 Basics* is required before taking either of the longer workshops. The *Introduction* workshop is required before taking the *Advanced* workshop.
