1. What did you like most about the instructor and course?
   - Dr. Yaya is extremely knowledgeable and enthusiastic.
   - Material presented clearly, easy to understand.
   - The professor is very knowledgeable and the course material is very interesting.
   - If he likes you the grades are fair.

2. What did you dislike most about this instructor and course?
   - Math part of the course.
   - Dr. Yaya is sometimes not good at listening to questions, and tries to answer them before he understands what is being asked.
   - Unfair grading
     - The instructor has somewhat unrealistic expectations and demands.
     - The subjectivity of how he grades both assignments and tests.
     - Taught math level too high for one program over other.
     - Tests are too broadly structured, grades too hard (10/20 is like a B+ for him)

3. What constructive suggestions do you have for this instructor or course?
   - Exams are too long and could be shortened. They are difficult because of the length, not because of the material. The class could improve in terms of quality if the exams and lecture would go more in depth and leave some less important stuff out.
   - Point system for questions on homework and exams.
   - The instructor should offer more guidance, and understanding.
   - Instead of grading assignments and tests subjectively try using objective standards its only fair, right?
   - Encourage students to investigate topics that tie the class topic which interest them not what you like.
   - Make tests that can be completed in the allotted class time. I would have thought as a teacher you would have notices that all except one or students finished the test before end of the class.
   - Try to follow the last question bubbled on front.
